Antarctic Expeditions, 2013

In close cooperation with the Chilean Antarctic Institute (INACH), we carried out two expeditions (in March and September) at Escudero (“Base Profesor Julio Escudero”, 62° 12’ S; 58° 57’ W) aimed at deploying the Transportable Antarctic Research Platform (TARP) of the Universidad de Santiago (USACH), and setting up a dual-band UV radiometer. The TARP deployment required shipping roughly 800 Kg of equipment and involved a team of 3 researchers supported on the field by INACH personnel.

The TARP is meant to support our ground-based measurements of the UV irradiance in the area.
